

Cedarberg Flame Throwers

A real portable flame thrower for killing weeds, grass or insects and their breeding places, thawing switches, ice and snow, disinfecting poultry yards, dog kennels, livestock yards and a hundred and one other uses.

The Flame Thrower incorporates the latest and best mechanical features of any thawing or burning torch on the market today. It is strictly a self-contained portable torch. There is no separate tank, nozzle or hose. The tank and nozzle are an integral part of the torch which makes for simplicity of operation and maintenance.

It will produce a heat of 2000° F and will operate up to two and one-half hours on one filling of the fuel tank and will burn in any position with ease. A control valve is provided for operating so you can obtain a high intense heat or a low flame. It can be used in high wind without blowing out and will operate in sub-zero weather.

Has an all-welded steel construction, employing the use of a new ring type generator that eliminates any hot spots and carbonization caused by the old coil type generator. The orifice of the control valve is automatically cleaned out when the control valve stem is closed. Burns kerosene, No. 1 range oil or tractor fuel.

Length overall	32½ inches
Fuel capacity	1 gallon
Net weight	8½ pounds
60	Each \$17.95

One in a carton.
